# 1 Introduction

The TMCH project provides an automated interface to allow users to interact in an automated fashion with the data stored in the Clearinghouse database (TMCH database). XML has been widely used by registries and registrars to provide an automated interfaces (the API) for their data exchange. This API provides similar functionality and will be provided using TLS to be as close to the current EPP standard as possible. The API may only be used by Trademark Agents that have contracted with the Clearinghouse.

This document contains some sample of commands and responses based on the XSD that should help building implementations to use the API provided to get direct access to the various objects in the TMCH database in an automated fashion.

The complete XSD scheme can be found under the section XSD schemes. It extends the Signed Mark Data (SMD) XSD description draft-lozano-smd-01.txt that was provided by ICANN. The structure of the mark block is intentionally included and not modified to prevent misunderstanding, make the mapping easy and prevent misinterpretation of the various fields.

## 1.1 Documentations

- XSD schemes
- Examples
- Appendixes with various lists

The provided schema allows the user of the automated interface to verify the syntactical correctness of the request sent to TMCH and the response returned. It details to a certain extent the possible options that are allowed in some fields while determining the format of other fields based on regular expressions.

This schema does not provide a full policy description, nor does it specify complex intricacies that exists between certain types and certain required fields.

## 1.2 Objects

There are 3 basic objects:

- Mark (a complex object which can take 3 forms: Registered Trademarks/Court Validated Marks/Marks protected by statute or treaty)
- Label (the domain name without its TLD extension)
- Uploaded document (implicitly linked to mark and as such not directly accessible using the automated interface)

We allow the 'C(reate)R(ead)U(pdate) schema for the Mark and Label object, using create, info and update/change commands to insert, retrieve and maintain these objects. This should provide an adequate means of creating a mechanism to synchronize your own local database with the TMCH database.

## 1.3 Session Control

To create a new session the [login command](#) can be used and to terminate the session the [log-out command](#) should be used. To verify if the connection with the server is still up and running the [hello command](#) is provided. The [hello command](#) can also be used to keep an open session alive preventing the server disconnecting after the session has been idle for a 5 minutes. Due to the nature of certain mark characteristics, some objects will have extra policy determined constraints. These will be described in detail later. A few examples are listed below

- The 'Description of goods and services class is comprised of a list of comma separated numbers for 1 to 45 or contains the value 46 when not applicable.
- A Registered trademark will need proof of use to be able to toggle the 'sunrise notification' on.
- A court validated mark needs a 'Court order' document attached when it is created

## 1.4 Enumerations

Currently, the following enumerations can be found in the XSD schema entitlement

- Owner
- Assignee
- Licensee

fileType

- pdf
- jpg

docClassType

- Trademark - Licensee declaration
- Trademark - Assignee declaration
- Trademark - Other
- Declaration of Proof of use including one single sample
- Proof of use - Other
- Copy of the court order

Other list of possible values such as country codes and jurisdictions can be found in Appendix.

## 2 XSD SCHEMA

This XSD schema uses the external XSD schemas

- mark-1.0 which can be found at <http://tools.ietf.org/html/draft-lozano-tmch-smd-02> section3.2
- signedMark-1.0 which can be found at <http://tools.ietf.org/html/draft-lozano-tmch-smd-02> section 3.1

```

### 3 Creating a Connection

This API is intended for use in diverse operating environments where transport and security requirements vary greatly. A Transport Layer Security (TLS) mechanism over standard TCP/IP sockets is used. This transport mechanism is based on the reference document RFC 5734 "Extensible Provisioning Protocol (EPP) Transport over TCP". Further security considerations are resolved by the TLS transport layer and are beyond the scope of this document.

Currently the API uses a self-signed CA certificate. You can download it via the website in case your EPP client requires you to verify the SSL certificate of the EPP server. The API is to be used in synchronous mode. A response to a command must be received by the client before sending another command. The API can be layered over multiple transport protocols.

The API can only be used in a connection-oriented mode. A connection-less mode can be simulated by sending a login/command/logout combination in one set. There is a timeout on the session. If a session has not been used for a period longer than 5 minutes, the system will enforce a logout command and close the connection. Any other requirements are further described in the standard.

The number of simultaneously open connections per trademark agent account is set at two connections. Attempting to open more sessions will be blocked.

XML is case sensitive. Unless stated otherwise, XML specifications and examples provided in this document must be interpreted in the character case presented. Any data unit sent to the server or received from the server contains two sections, a block describing the message length and an XML message.

#### 3.1 First Block

A 32-bit header describing the total length of the data unit including the length of the first block. The header information (4 bytes) is to be sent in network order (also known as BigEndian).

### 3.2 Second Block

This block contains the XML API command or response. It is an XML structure that complies with the above XSD description. The XML block has to use a supported character set such as UTF-8 and an XML version of 1.0. Please note that UTF-8 is the RECOMMENDED character encoding for use with this API.

All API commands are enclosed within in <tmch> ... </tmch> tags.

After setting up a session the first message will be sent by the server and will contain a 'hello' response XML document. Error messages are compliant with the EPP standard. A description of the various messages can be found in appendix2.

During a session it is always possible to add a clTRID tag. This block will always be mimicked by the server in the trID block enabling the client to track the command and response sent by the server. The server will add an extra svTRID block to the trID block uniquely identifying the server response code. This reference can be useful to trace problems and might be asked or referred to in case of technical problems.

### 3.3 Labels

The following method can be used to verify if a label matches the name of a mark a dot '.' is not allowed in a mark name – all mark names (and labels) with a dot will be rejected. Determine which characters can be represented in an IDN label determine which characters can be represented in an IDN domain name (refer to IDN 2008 guideline) all other IDN non-permissible characters can be omitted or replaced by a hyphen '-' in case the character is the ampersand (&) or the ampersand (@) it can be omitted, replaced by a hyphen '-' or by a transliteration of 'and' or 'at' in the language linked to the jurisdiction or the country where the mark is registered. (See Appendix 3)

Verify if the label is conform the general domain name rules

- name cannot start with a hyphen ('-')
- name cannot end in a hyphen ('-')
- name with a dash on the 3rd and 4th position is rejected
- name and its ascii representation (a-label) cannot be longer than 63 characters If using the 5 above steps allow to convert the mark name in a label will be accepted.

Examples Mark name Labels

ab & c	<b>Allowed:</b> ab-c, ab-c, abandc, ab-and-c (if jurisdiction is US), ...
	<b>Not allowed:</b> ab---c (dash on 3rd and 4th position),
	<b>Not allowed:</b> a-and-c (b cannot be omitted), ...
a+b	<b>Allowed:</b> ab, a-b
+abc+	<b>Allowed:</b> abc
	<b>Not allowed:</b> -abc (starts with dash), abc- (ends with a dash), ...

### 3.3.1 Algorithms

1. We will assume the trademark name TM is according to ICANN specifications
2. Convert all characters to the lower case equivalent
3. create an empty list of lists A
4. for all characters C in the name TM check if the character C can be represented in IDN2008
  - o yes : create a list L with a single element, the character C
  - o no: create a list L with 2 elements : an empty string and the character '-'
  - o if the character is '&' or '@' add additional transliterations to the list L (based on country or jurisdiction – see appendix 3)
  - o add the list L to the list of lists A
5. create a complete set S of labels by calculation all unique combinations of exactly one choice for all lists L in the list A (this can easily be done by recursion or by straight forward looping over all combination's)
6. eliminate all labels from the set S that start or end in a '-' have a '-' in 3rd and 4th position or are longer than 63 characters
7. S now contains the list of all possible labels linked to the mark name TM

## 4 Session commands

Session commands are intended to set up new sessions and to keep the session alive to process various CREATE/UPDATE/READ/DELETE (CRUD) commands.

There are 3 basic session commands

- login
- logout
- hello (to keep the session alive)

### 4.1 Login

Example of a login command

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <login>
      <clID>u777</clID>
      <pw>ReplaceWithPass</pw>
    </login>
    <clTRID>client-id-123</clTRID>
  </command>
</tmch>
```

The response in case of a positive result confirms user identification

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <trID>
      <clTRID>ref-to-which-login</clTRID>
      <svTRID>login-1390895916</svTRID>
    </trID>
  </response>
</tmch>
```

After logging in successfully you have an authenticated session. You will be able to retrieve information on all objects in your portfolio/account.

## 4.2 Log out

The logout command is intended to terminate a session.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <logout/>
  </command>
</tmch>
```

The result will be the following XML message after which the server will close the connection.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="76" id="17" />
    <trID>
      <svTRID>logout-1390896163</svTRID>
    </trID>
  </response>
</tmch>
```

Notice that if a connection has not been used for some time, the server will send this message to the client (auto-logout) and the connection will be closed.

## 4.3 Hello

The hello command can be sent at all moments. It can be used to verify if the connection is still open or to keep the session alive. It can also be used if a connection is established since it does not require an authenticated session.

Command to send

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
```

```
<hello/>
</tmch>
```

The response is

```
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <greeting>
    <svID>TMCH server v1.1</svID>
    <svDate>2014-01-28T08:01:16Z</svDate>
  </greeting>
</tmch>
```

## 5 Create mark

With the create command you will be able to create the various mark types.

There are 3 different types of marks that can be registered

- registered trademark
- court validated mark
- statute or treaty

### 5.1 Create registered trademark

The following command can be used to create a registered trademark:

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <create>
      <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
        <trademark>
          <id>0000061234-1</id>
          <markName>Example One</markName>
          <holder entitlement="owner">
            <org>Example Inc.</org>
            <addr>
              <street>123 Example Dr.</street>
              <street>Suite 100</street>
              <city>Reston</city>
              <sp>VA</sp>
              <pc>20190</pc>
              <cc>US</cc>
            </addr>
          </holder>
          <jurisdiction>US</jurisdiction>
          <class>35</class>
          <class>36</class>
          <goodsAndServices>Dirigendas et eiusmodi
            featuring infringo in airfare et cartam servicia.
          </goodsAndServices>
          <regNum>234235</regNum>
          <regDate>2009-08-16T09:00:00.0Z</regDate>
          <exDate>2015-08-16T09:00:00.0Z</exDate>
        </trademark>
```

```

</mark>
<period unit="y">5</period>
<document>
    <docType>Other</docType>
    <fileName>C:\\ddafs\\file.png</fileName>
    <fileType>jpg</fileType>
    <fileContent>/9j/4AAQSkZJRgABAQEASABIAAD/2wBDAP///////////////2wBDAf///////////////
///////////////wAARCAABAAEDASIA
AhEBAxEB/8QAFQABAQAAAAAAAAAAAAAP/xAAUAEAAAAAAAAAAAAAAA/8QAFAB
AAAAAAAAAAAAAP/EABQRAQAAAAAAAAAAAAAD/2gAMAwEAAhEDEQA/AKAA/9k=
</fileContent>
    </document>
    <label>
        <aLabel>exampleone</aLabel>
        <smdInclusion enable="1"/>
        <claimsNotify enable="1"/>
    </label>
    <label>
        <aLabel>example-one</aLabel>
        <smdInclusion enable="0"/>
        <claimsNotify enable="1"/>
    </label>
</create>
</command>
</tmch>

```

## Remarks

Trademark	Means registered trademark
id	Unique reference that should start with the agents uid formatted in 6 digits left padded with zeros and ending in -1
markName	Name of the mark
Holder entitlement	Owner/Licensee/Assignee
sp	State/Province
ORG	Name of the organization that is the trademark holder
ADDR	Address consisting out of :
Street	Street
City	City
sp	State

pc	Postal code
cc	Country code (for the complete list see appendix 1)
class	Nice classification number (1-45 or 46 for N/A)
Jurisdiction	for the complete list see appendix 1)
goodsAndServices	Full copy of the complete description of goods and services information on the registration form
regNum	The registration number of the trademark
regDate	The date of registration of the mark (YYYY-MM-DD)
exDate	The date on which a trademark expires (YYYY-MM-DD)
Period unit	The term of registration for a trademark record (1,3 or 5 years)
docType	Licensee declaration/ Trademark - Assignee declaration/ Trademark – Other/ Declaration of Proof of use including one single sample/ Proof of use - Other
fileContent	Content of the file, base64 encoded
aLabel	ASCII representation of the label linked to the mark
SmdInclusion	enable Flag for sunrise services: the label will be included in the SMD file to be used in sunrise
claimsNotify	Flag for the claims services: registrants will be made aware of mark existance, and you will receive notification on registration during the initial period of general availability

## 5.2 Create a Court Validated Mark

The following command can be used to create a court-validated mark

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <create>
      <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
        <court>
          <id>0000061234-1</id>
          <markName>Example One</markName>
          <holder entitlement="owner">
            <org>Example Inc.</org>
            <addr>
              <street>123 Example Dr.</street>
              <street>Suite 100</street>
              <city>Reston</city>
              <sp>VA</sp>
              <pc>20190</pc>
              <cc>US</cc>
            </addr>
          </holder>
          <goodsAndServices>Dirigendas et eiusmodi
            featuring infringi in airfare et cartam servicia.
          </goodsAndServices>
          <refNum>234235</refNum>
          <proDate>2009-08-16T09:00:00.0Z</proDate>
          <cc>US</cc>
          <courtName>P.R. supreme court</courtName>
        </court>
      </mark>
      <period unit="y">5</period>

## Remarks

court	This means that you want to enter a court validated mark
id	Unique reference that should start with the agents uid formatted in 6 digits left padded with zeros and ending in -1
markName	Name of the mark as on the registration form
Holder entitlement	Owner/Licensee/Assignee
org	Name of the organization that is the trademark holder
addr	Address consisting out of :
street	Street
city	City
sp	State/Province
pc	Postal code
cc	Country code (for the complete list see appendix 1)
goodsAndServices	Copy of the complete description of goods and services
refNum	Reference number of the court order
proDate	The date of protection of the mark (YYYY-MM-DD)
CourtName	Name of the court
Period unit	The term of registration for a trademark record (1,3 or 5 years)
docType	Trademark - Licensee declaration/ Trademark - Assignee declaration/Trademark - Copy of the court order
fileContent	Content of the file, base64 encoded
aLabel	ASCII representation of the label linked to the mark
SmdInclusion	Flag for sunrise services : the label will be included in the SMD file to be used in sunrise
claimsNotify	Flag for the claims services : registrants will be made aware of mark existance, and you will receive notification on registration during the initial period of general availability

### 5.3 Create statute or treaty

The following command can be used to create a statute or treaty mark

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <create>
      <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
        <treatyOrStatute>
          <id>00000712423-1</id>
          <markName>Example One</markName>
          <holder entitlement="owner">
            <org>Example Inc.</org>
            <addr>
              <street>123 Example Dr.</street>
              <street>Suite 100</street>
              <city>Reston</city>
              <sp>VA</sp>
              <pc>20190</pc>
              <cc>US</cc>
            </addr>
          </holder>
          <protection ruling="US">
            <cc>US</cc>
          </protection>
          <goodsAndServices>Dirigendas et eiusmodi
            featuring infringo in airfare et cartam servicia.
          </goodsAndServices>
          <refNum>234235</refNum>
          <proDate>2009-08-16T09:00:00.0Z</proDate>
          <title>My Mark Title</title>
          <execDate>2010-01-05T09:00:00.0Z</execDate>
        </treatyOrStatute>
      </mark>
      <period unit="y">5</period>
      <document>
        <docType>Other</docType>
        <fileName>C:\\ddafs\\file.png</fileName>
        <fileType>jpg</fileType>

```

```

</fileContent>
    </document>
    <label>
        <aLabel>exampleone</aLabel>
        <smdInclusion enable="1"/>
        <claimsNotify enable="1"/>
    </label>
    <label>
        <aLabel>example-one</aLabel>
        <smdInclusion enable="0"/>
        <claimsNotify enable="1"/>
    </label>
</create>
</command>
</tmch>

```

## Remarks

treatyorstatue	This means that you want to enter a mark protected under statute or treaty
id	Unique reference that should start with the agents uid formatted in 6 digits left padded with zeros and ending in -1
markName	Name of the mark as on the registration form
Holder entitlement	Owner/Licensee/Assignee
org	Name of the organization that is the trademark holder
addr	Address consisting out of :
street	Street
city	City
sp	State/Province
pc	Postal code
cc	Country code (for the complete list see appendix 1)
goodsAndServices	Copy of the complete description of goods and services
refNum	Reference number of the mark
proDate	The date of protection of the mark (YYYY-MM-DD)
Title	Title of the statute or treaty
Period unit	The term of registration for a trademark record (1, 3 or 5 years)
execdate	Date of execution of the statute or treaty (YYYY-MM-DD)

docType	Trademark - Licensee declaration/ Trademark - Assignee declaration/Trademark – Other
fileContent	Content of the file, base64 encoded
aLabel	ASCII representation of the label linked to the mark
SmdInclusion	enable Flag for sunrise services : the label will be included in the SMD file to be used in sunrise
claimsNotify	Flag for the claims services : registrants will be made aware of mark existence, and you will receive notification on registration during the initial period of general availability

### 5.3.1 Create mark response

When a mark is successfully created the following XML messages will be returned by the server

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="76" id="17" />
    <resData>
      <creData>
        <id>00000100010001390896163-1</id>
        <crDate>2014-01-28T09:02:43.7Z</crDate>
        <balance>
          <amount currency="USD">57830.2500</amount>
          <statusPoints>1407</statusPoints>
        </balance>
      </creData>
    </resData>
    <trID>
      <svTRID>create-1390896163-5266</svTRID>
    </trID>
  </response>
</tmch>
```

### Remarks

If the mark is created successfully the resulting response includes

- 1.The number of messages still pending
- 2.A balance section that contains the remaining currency and your status points

## 6 Info Mark

The info linked to a specific mark can be retrieved using the info command. Depending on the request and the status of the mark the info can be formatted in various different ways.

- Mimicking the create command
- In SMD format
- In base64 encoded SMD format
- In full SMD compatibility format

### 6.1 Info Mark command

The plain version of the info command will mimic the create command

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <info>
      <id>00000712423-1</id>
    </info>
  </command>
</tmch>
```

The result is a complete set of info linked to a mark with the given handle. The following example relates to a registered trademark.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="76" id="17" />
    <resData>
      <infData>
        <id>00071234-992</id>
        <status s="new" />
        <pouStatus s="notSet" />
        <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
          <court>
            <id>00071234-992</id>
```

```

<markName>My name</markName>
<holder entitlement="assignee">
    <name>Mr. Rep</name>
    <org>Owner INC</org>
    <addr>
        <street>Jacobs Street</street>
        <city>Bruges</city>
        <sp>VA</sp>
        <pc>8100</pc>
        <cc>BE</cc>
    </addr>
    <voice x="1234">+1.32235523</voice>
    <fax>+1.32235523</fax>
    <email>j@bla</email>
</holder>
<goodsAndServices>BX-1421312-IRUNF-134</goodsAndServices>
<refNum>12345678</refNum>
<proDate>2009-08-16T00:00:00Z</proDate>
<cc>BE</cc>
<courtName>Court of Brussels</courtName>
</court>
</mark>
<label>
    <aLabel>my-name</aLabel>
    <uLabel>my-name</uLabel>
    <smdInclusion enable="0" />
    <claimsNotify enable="0" />
</label>
<label>
    <aLabel>myname</aLabel>
    <uLabel>myname</uLabel>
    <smdInclusion enable="0" />
    <claimsNotify enable="0" />
</label>
<crDate>2013-03-22T10:42:06.0Z</crDate>
<upDate>2013-03-19T00:32:45.9Z</upDate>
<exDate>2013-03-19T00:32:45.9Z</exDate>
</infData>
</resData>
<trlID>
    <svTRID>poll-1390900577</svTRID>
</trlID>
</response>
</tmch>

```

Please note that when the info command returns a successful result, the response includes 3 blocks

- the result block showing the command is executed successfully
- the msgQ block showing the number of pending messages if there are any (if not the block will not be added)
- the resData block showing the mark info

## 6.2 Info Mark SMD

If the mark has been approved, you will be able to download the SMD file linked to the mark using the following command

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <command>
        <info type="smd">
            <id>000009812423-1</id>
        </info>
    </command>
</tmch>
```

The result is an encapsulated SMD file

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <response>
        <result code="1000">
            <msg>Command completed successfully</msg>
        </result>
        <msgQ count="76" id="17" />
        <resData>
            <infData>
                <id>0000015071387359953364-1</id>
                <status s="verified" />
                <smdId>000000000023234-2</smdId>
                <smd:signedMark xmlns:smd="urn:ietf:params:xml:ns:signedMark-1.0" id="_7f3b-6f8c-5cf1-4f6b-9187-21dd7d53c968"><smd:id>0000005071387359953364-1</smd:id><smd:issuerInfo issuerID="1"><smd:org>Deloitte</smd:org><smd:email>smd-support@deloitte.com</smd:email><smd:url>smd-support.deloitte.com</smd:url><smd:voice>+32.20000000</smd:voice></smd:issuerInfo><smd:notBefore>2013-12-18T09:45:53.364Z</smd:notBefore><smd:notAfter>2014-05-02T22:00:00.000Z</smd:notAfter><mark:mark xmlns:mark="urn:ietf:params:xml:ns:mark-1.0"><mark:trademark><mark:id>000001136757513215-1</mark:id><mark:markName>Example 3</mark:markName><mark:holder entitlement ="owner">

## 6.4 Info Mark file

Last format is equivalent to the web interface download. It includes the header section and the begin and end tags to the encapsulated base64 encode SMD file. Please note that the header section is a reference section only. As such, it should not be used to extract information.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <command>
        <info type="file">
            <id>00000715423-1</id>
        </info>
    </command>
</tmch>
```

The result is a complete set of info linked the mark with the given handle

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <response>
        <result code="1000">
            <msg>Command completed successfully</msg>
        </result>
        <msgQ count="76" id="17" />
        <resData>
            <infData>
                <id>00000113675751323-1</id>
                <smdId>00000000023234-2</smdId>
                <status s="verified" />
                <>Marks: Example One smdID: 0000004951387359953170-1

## 7 Update Mark

To update a mark the update command can be used. The update command can contain three different sections

- add : this allows for adding labels, and documents to the mark
- rem : this allows to remove labels from the mark
- chg : this block allows you to change the contents of the mark block

### 7.1 Update Mark Settings

The following command adds a document and a label, removes a label, and changes the type of the mark from trademark to a treatyOrStatute type.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>000712423-2</id>
      <add>
        <document>
          <docType>tmOther</docType>
          <fileName>C:\\ddafs\\file2.png</fileName>
          <fileType>jpg</fileType>
          <fileContent>YnJvbAo=</fileContent>
        </document>
        <label>
          <aLabel>my-name</aLabel>
          <smdlInclusion enable="0"/>
          <claimsNotify enable="1"/>
        </label>
      </add>
      <rem>
        <label>
          <aLabel>my-name</aLabel>
          <smdlInclusion enable="1"/>
          <claimsNotify enable="1"/>
        </label>
      </rem>
      <chg>
        <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
          <treatyOrStatute>
            <id>000712423-2</id>
            <markName>Example One</markName>
        </mark>
      </chg>
    </update>
  </command>
</tmch>
```

```

<holder entitlement="owner">
  <org>Example Inc.</org>
  <addr>
    <street>123 Example Dr.</street>
    <street>Suite 100</street>
    <city>Reston</city>
    <sp>VA</sp>
    <pc>20190</pc>
    <cc>US</cc>
  </addr>
</holder>
<protection>
  <cc>US</cc>
  <region>Puerto Rico</region>
  <ruling>US</ruling>
  <ruling>PR</ruling>
</protection>
<goodsAndServices>Dirigendas et eiusmodi
  featuring infringo in airfare et cartam servicia.
</goodsAndServices>
<refNum>234235</refNum>
<proDate>2009-08-16T09:00:00.0Z</proDate>
<title>My Mark Title</title>
<execDate>2010-01-05T09:00:00.0Z</execDate>
</treatyOrStatute>
</mark>
</chg>
</update>
</command>
</tmch>

```

## 7.2 Adding a label

Alternative is a very small update adding just one label. The following provides you with an example.

```

<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>0000011363778801363778080-1</id>
      <add>
        <label>
          <aLabel>exampleone</aLabel>
          <smdlInclusion enable="0"/>
        </label>
      </add>
    </update>
  </command>
</tmch>

```

```

        <claimsNotify enable="1"/>
    </label>
</add>
</update>
</command>
</tmch>
```

Response to an update command if update succeeded

```

<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <response>
        <result code="1000">
            <msg>Command completed successfully</msg>
        </result>
        <msgQ count="76" id="17" />
        <trID>
            <svTRID>update-1391086383-5308</svTRID>
        </trID>
    </response>
</tmch>
```

### 7.3 Changing label flags

Similar to adding labels, the flags on the labels can be toggled using the `<chg>` block.

```

<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <command>
        <update>
            <id>0000011363778801363778080-1</id>
            <chg>
                <label>
                    <aLabel>exampleone</aLabel>
                    <smdlInclusion enable="0"/>
                    <claimsNotify enable="1"/>
                </label>
            </chg>
        </update>
    </command>
</tmch>
```

In a similar fashion extra documents can be added. Please note that documents can never be removed.

## 8 UDRP COURT CASES

To add a court case or an udrp case to an existing mark, the mark has to be in status VERIFIED. If not, you will not be able to add a case block to the mark.

The case handle starts with the keyword 'case' followed by a dash ('-') followed by six digits containing the uid of the agent (left padded with '0') followed by a set of digits (maximum length 63 characters).

### 8.1 Adding UDRP case

The update command can be used to add an udrp case to an existing mark using the add block.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>000001132-1</id>
      <add>
        <case>
          <id>case-00000123466989999999</id>
          <udrp>
            <caseNo>987654321</caseNo>
            <udrpProvider>National Arbitration Forum</udrpProvider>
            <caseLang>Spanish</caseLang>
          </udrp>
          <document>
            <docType>courtCaseDocument</docType>
            <fileName>02-2013-TMCHdefect1.jpg</fileName>
            <fileType>jpg</fileType>
            <fileContent>YnJvbAo=</fileContent>
          </document>
          <label>
            <aLabel>a</aLabel>
          </label>
          <label>
            <aLabel>b</aLabel>
          </label>
        </case>
      </add>
    </update>
  </command>
```

```
</tmch>
```

## 8.2 Adding Court Case

The update command can be used to add a court case to an existing mark using the add block.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>000001132-1</id>
      <add>
        <case>
          <id>case-00000123466989979999</id>
          <court>
            <refNum>987654321</refNum>
            <cc>BE</cc>
            <courtName>Bla</courtName>
            <caseLang>Spanish</caseLang>
          </court>
          <document>
            <docType>courtCaseDocument</docType>
            <fileName>02-2013-TMCHdefect2.jpg</fileName>
            <fileType>jpg</fileType>
            <fileContent>YnJvbAo=</fileContent>
          </document>
          <label>
            <aLabel>a</aLabel>
          </label>
          <label>
            <aLabel>b</aLabel>
          </label>
        </case>
      </add>
    </update>
  </command>
</tmch>
```

## 8.3 Managing label which links to a case

Add or remove labels linked to a case using the update add or update remove case label section.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
```

```

<command>
  <update>
    <id>000001132-1</id>
    <add>
      <case>
        <id>case-00000123466989979998</id>
        <label>
          <aLabel>x</aLabel>
        </label>
      </case>
    </add>
  </update>
</command>
</tmch>

```

## 8.4 Managing documents linked to a case

Add documents linked to a case using the update add case label section.

```

<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>0000011363778801363778080-1</id>
      <add>
        <case>
          <id>case-00000123456</id>
          <document>
            <docType>tmOther</docType>
            <fileName>C:\\ddafs\\file2.png</fileName>
            <fileType>jpg</fileType>
            <fileContent>YnJvbAo=</fileContent>
          </document>
          <label>
            <aLabel>my-name-three</aLabel>
          </label>
        </case>
      </add>
    </update>
  </command>
</tmch>

```

## 8.5 Changing a case

To change case data use the update chg case block

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <update>
      <id>0000011363778801363778080-1</id>
      <chg>
        <case>
          <id>case-00000123456</id>
          <udrp>
            <caseNo>987654321</caseNo>
            <udrpProvider>NAF</udrpProvider>
            <caseLang>Spanish</caseLang>
          </udrp>
        </case>
      </chg>
    </update>
  </command>
</tmch>
```

## 8.6 Retrieve case data

The case information can be retrieved using the info:mark command.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="75" id="19" />
    <resData>
      <infData>
        <id>000001136757513215-1</id>
        <status s="verified" />
        <pouStatus s="valid" />
        <mark xmlns="urn:ietf:params:xml:ns:mark-1.0">
          <trademark>
            <id>000001136757513215-1</id>
            <markName>Example 3</markName>
            <holder entitlement="owner">
              <name>Example name</name>
              <org>Example Inc.</org>
            </holder>
          </trademark>
        </mark>
      </infData>
    </resData>
  </response>
</tmch>
```

```

</tmch>
```

## 9 Renew

### Command layout

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <renew>
      <id>00000126-1</id>
      <curExpDate>2014-01-02</curExpDate>
      <period unit="y">3</period>
    </renew>
  </command>
</tmch>
```

Please note that

- Currently only extensions for 1 year and 3 years are allowed.
- A renew forces a creation on a new SMD file

Response to the renew command contains a confirmation or a reason why the renew was not possible. If the command executes successfully you will also get a balance block that includes the new expiration date and a msgQ block that contains the number of pending messages.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="76" id="17" />
    <resData>
      <renData>
        <id>00000126-1</id>
        <exDate>2017-08-08T00:00:00Z</exDate>
        <balance>
          <amount currency="USD">56588.2500</amount>
          <statusPoints>1414</statusPoints>
        </balance>
      </renData>
    </resData>
  </response>
</tmch>
```

```
<trID>
<svTRID>renew-1391087231-5310</svTRID>
</trID>
</response>
</tmch>\
```

## 10 Check Mark

To verify if a handle is already in use (system wide) the check command can be used. This is to facilitate the choice of mark handles.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <check>
      <id>000712423-2</id>
      <id>000001436269876872643629798257-1</id>
      <id>00000113637780801363778080-1</id>
    </check>
  </command>
</tmch>
```

The results is a list of handles that can or should not be used

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
    <msgQ count="76" id="17" />
    <resData>
      <chkData>
        <cd>
          <id avail="0">000712423-2</id>
          <reason>Format: 000001XXXXXXXXXX-1</reason>
        </cd>
        <cd>
          <id avail="1">000001436269876872643629798257-1</id>
        </cd>
        <cd>
          <id avail="0">00000113637780801363778080-1</id>
          <reason>Already exists</reason>
        </cd>
      </chkData>
    </resData>
    <trID>
      <svTRID>check-1391087493</svTRID>
    </trID>
  </response>
</tmch>
```

```
</response>
</tmch>
```

If there are marks that change status or require attention due to external changes such as validator approval or disapproval a message referencing the mark will be pushed on a queue which can be polled in a much similar way to the EPP poll mechanism.

## 11 POLL

Poll messages are used to inform you of changes to the database that were triggered by a third party process. This way you are informed of any external change that is relevant to you mark record or your account status. These messages vary from warnings on the expiry of certain documents, mark records, expiration dates, over account balance messages to the notices on registered domain names.

For a list of poll codes and the messages linked to them see appendix 2.

### 11.1 Poll Messages

Check if messages are available

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <command>
        <poll op="req"/>
    </command>
</tmch>
```

#### 11.1.1 Poll response (no msg)

No messages for polling are available.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
    <response>
        <result code="1300">
            <msg>Command completed successfully; no messages</msg>
        </result>
        <trID>
            <svTRID>TMCH-000000001</svTRID>
        </trID>
    </response>
</tmch>
```

### 11.1.2 Poll response (msg pending)

There are messages available for polling: the first message is returned and gives the handle to the mark that has undergone changes. NOTE: do not forget to dequeue the message.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1301">
      <msg>Command completed successfully; ack to dequeue</msg>
    </result>
    <msgQ count="76" id="17">
      <qDate>2013-07-25T13:36:11.3Z</qDate>
      <msg>123 Mark has been verified and approved</msg>
    </msgQ>
    <resData>
      <infData>
        <id>00000113675751323-1</id>
        <status s="verified" />
      </infData>
    </resData>
  <ctrlD>
    <clTRID>poll-123</clTRID>
    <svTRID>poll-1391087629</svTRID>
  </ctrlD>
  </response>
</tmch>
```

### 11.1.3 Poll response (not a mark)

In case there are messages that are not related to marks you will get a different formatted message.

NOTE : do not forget to dequeue the message.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1301">
      <msg>Command completed successfully; ack to dequeue</msg>
    </result>
    <msgQ count="1" id="123">
      <qDate>2013-01-21T12:01:01.999Z</qDate>
      <msg>Watermark of USD 2500 passed</msg>
    </msgQ>
    <trID>
      <svTRID>TMCH-000000001</svTRID>
    </trID>
  </response>
</tmch>
```

### 11.2 Poll ack (dequeue)

Dequeue a message row be able to access the next message in the queue.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <command>
    <poll op="ack" msgID="18"/>
  </command>
</tmch>
```

#### 11.2.1 Poll ack (response last message)

Response if there is no more message after the last dequeue.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
  <response>
    <result code="1000">
      <msg>Command completed successfully</msg>
    </result>
  </response>
</tmch>
```

```
</result>
<trID>
    <svTRID>poll-1391089968</svTRID>
</trID>
</response>
</tmch>
```

### 11.2.2 Poll ack (response more message)

Response if there are more messages after the last dequeue.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
<response>
<result code="1000">
<msg>Command completed successfully</msg>
</result>
<msgQ count="2" id="124"/>
<trID>
<svTRID>TMCH-000000001</svTRID>
</trID>
</response>
</tmch>
```

## 12 Transfer

### 12.1 Transfer – request to execute

Check if messages are available

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
<command>
  <transfer op="execute">
    <id>000001123456789876543211113333-1</id>
    <authCode>qwertyasdfgh</authCode>
  </transfer>
</command>
</tmch>
```

### 12.2 Transfer response

If the transfer is executed successfully a trnData block is returned including the new mark id and an updated balance block.

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
<response>
  <result code="1000">
    <msg>Command completed successfully</msg>
  </result>
  <msgQ count="75" id="19" />
  <resData>
    <trnData>
      <newId>000001123456789876543211113333-1</newId>
      <trnDate>2014-01-30T15:27:14.3Z</trnDate>
      <balance>
        <amount currency="USD">56565.2500</amount>
        <statusPoints>1414</statusPoints>
      </balance>
    </trnData>
  </resData>
  <trID>
    <svTRID>create-1391092034-5317</svTRID>
  </trID>
</response>
</tmch>
```

## 13 ERROR RESPONSE

Error responses take the following form

```
<?xml version="1.0" encoding="utf-8"?>
<tmch xmlns="urn:ietf:params:xml:ns:tmch-1.1">
<response>
<result code="2303">
<msg>Object does not exist: domain 100</msg>
</result>
<trID>
<svTRID>TMCH-000000001</svTRID>
</trID>
</response>
</tmch>
```

You can find an overview of the codes in Appendix 2. The 'msg' label is a human readable string that can be used to further diagnose the problem. This text is not formatted or structured and should not be used to automate processes.

## **14 APPENDIX 1**

### **14.1 Country Codes**

Andorra	AD
United Arab Emirates	AE
Afghanistan	AF

## **15 APPENDIX 2**

### **15.1 Poll Codes**

102	Proof of use (POU) is expire
103	Proof of use (POU) has been verified and approved
104	Proof of use (POU) has not been approved and invalidated
105	Proof of use (POU) is not approved. Further attention needed
123	Mark has been verified and approved
124	Mark is not approved. Further attention needed
126	Mark has not been approved and invalidate
127	Mark has not been corrected within 20 days and invalidated.
134	Exception :validator still needs more info to approve mark
137	Mark expired
146	Correction period expired
154	Exception :user request to re-edit after changes
164	Exception :mark can be re-edited
190	POU will expire soon
191	Mark registration will expire soon
196	Warning :Mark about to be invalidated due to INCORRECT status time-out
197	Mark will expire soon
198	Mark has been deactivated
199	Mark transferred out/SMD has been revoked
210	The domain name [\$dn] was registered during sunrise
220	The domain name [\$dn] was registered during claims period
230	The domain name [\$dn] has been registered
240	The domain name [\$dn] has been registered during the Qualified Launch Program
310	SMD has been created
320	SMD has been regenerated

330	SMD has been revoked
400	Account status has gone below watermark level (\$level)
500	UDRP/Court case status change

## 15.2 API error codes

And human readable error messages

2001	Not a valid XML document tree
2201	Not logged in
2202	Login failed
2303	Attributes not allowed when removing a label
2303	Case <casehandle> does not exist

2303	Case language not found
2303	Case language not found in list
2303	Case status does not allow update to case block
2303	Case type does not correspond with current type (<casetype>)
2303	Could not find case object
2303	Could not find court case country code \$cc
2303	file format is not conform jpg or PDF
2303	file is too big (max <maxfilesize>)
2303	fileType <fileType> is not allowed
2303	Found virus: <virus>
2303	Invalid block in case change request
2303	Invalid court case country code <casetype>
2303	Invalid mark id format (Format: <00uid>XXXXXXXXXX-1)
2303	Invalid period length
2303	Invalid period unit
2303	Invalid transfer code
2303	Invalid udrpProvider

2303	Label <aLabel> does not exists
2303	Mark id <handle> does not exist
2303	Mark id <handle> has different curExpDate
2303	Mark id <handle> does not exist
2303	Not enough credits left to execute transfer
2303	Object does not exist
2303	Status of label <aLabel> does not allow removal
2303	Too many labels connected to case (max=<casemaxlabels>)
2303	Too many labels linked to mark (max=<maxlabels>)
2306	Cannot map <field>
2306	Case block contains sections that can not be removed
2306	Case <casehandle> does not exist
2306	caseNo is a required field
2306	Command not implemented
2306	courtName is a required field
2306	Document block in mark block not supported
2306	Error updating prepaid for mark case
2306	Error updating prepaid for mark:'.\$mark_i
2306	handle <handle> already exists
2306	Handle <handle> has invalid format - should be <00uid>XXXXXXXXXX-1
2306	Invalid case country code \$cc
2306	Invalid case id format (format should be 'case-<00uid>XXX', XXX a series of digits)
2306	Invalid class <class>
2306	Invalid country code (<ccref>) <cc>
2306	Invalid document type for court case
2306	Invalid document type for udrp case
2306	Invalid duration <duration>

2306	Invalid duration unit <duration unit>
2306	Invalid jurisdiction <jurisdiction>

2306	Invalid label <aLabel>
2306	Label block in mark block not supported
2306	Label <aLabel> already exists
2306	Mark id <handle> can not be extended with this period
2306	Mark id <handle> is not in status VERIFIED
2306	Mark id <handle> will not expire this year - no renew possible
2306	Mark ids do not match!
2306	Mark status does not allow update of mark
2306	Missing "Copy of the court order"
2306	Missing "Declaration of Proof of use including one single sample"
2306	Not allowed to add udrp/court case without label(s)
2306	not enough credit
2306	Object status does not allow extra file upload
2306	Object status does not allow udrp/court case addition
2306	Only extra POU documents can be added
2306	Only one handle allowed
2306	Output processing not implemented
2306	Policy violation : holder name or organization required
2306	Policy violation :<msg>
2306	Policy violation: no valid POU - impossible to switch smdInclusion on
2306	Policy violation :only one <nodeName> expected
2306	Policy violation :region not supported
2306	Policy violation :<ref> required
2306	refNum is a required field
2306	Too many cases connected to this mark (max=<maxcases>)
2306	Too many labels connected to case (max=<maxcaselabels>)
2306	Too many labels connected to mark (max=<maxcaselabels>)
2306	Transfer operation not implemented
2306	Unique case identifier already in use
2400	file <fileName> could not be saved
